

NYCOIL Pneumatics

Products For All Applications

Since its inception in 1958, Nycoil has recognized the importance of innovation. From the introduction of the original Self-Storing Air Hose over fifty years ago to the more recent blow gun and development of our state of the art Poly-Matic Push-To-Connect Fittings, Nycoil has established itself as a leader in the Fluid Power and Industrial markets.

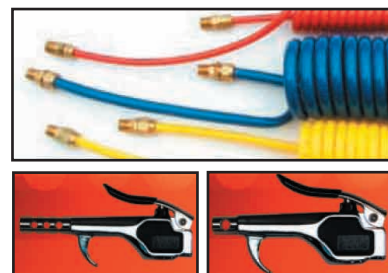

SELF-STORE HOSE:

Unlike straight hose that lays on the floor or workbench, Self-Storing Hose retracts to keep the area clutter free. Nylon is resistant to a wide variety of chemicals, thus making it a good choice for most industrial environments. Our state-of-the-art spring like strain relief fitting system further enhances both the performance and appearance of this hose assembly.

BLOW GUNS:

The Nycoil Blow Gun offering is the most complete in the industry. In addition to a wide variety of tips that are designed for a multitude of special functions, we have a selection of Blow Gun body styles to meet the preferences of any user. From pistol grips to "safety" tips that conform to OSHA Standard, we have you covered.

PNEUMATIC TUBING:

Nycoil offers three thermoplastic compounds for its tubing products; Nylon, Polyethylene and Polyurethane. Each offer distinct advantages depending on the application requirements. For this reason, Nycoil has a range of products to suite your application. Whether you need mini coils, tubing or strip tubing, we have the product to meet your demands.
